

CGI Unify360 Hybrid Infrastructure Services

Experience the commitment®

With the rise in popularity of cloud-based infrastructure, enterprises are seeking to combine in-house and “as-a-service” solutions to create their ideal IT portfolio mix. These hybrid IT environments present new challenges in terms of security, resources, compliance, costs and complexity.

The CGI Unify360 Hybrid IT Management Suite enables holistic management of both on-premises and cloud-based services to help enterprises maximize their IT portfolios for greater agility, innovation and competitive advantage.

THE RIGHT CLOUD FOR THE WORK

CGI's hybrid infrastructure as a service (IaaS) offerings give enterprises the power to choose an optimal mix of clouds for their unique workload portfolios and complex requirements, including cost, security, performance, agility, architecture, resilience and strategy. An optimal mix is fundamental to enabling IT modernization to support transformation into agile customer-centric digital enterprises. To support these multi-dimensional requirements, we offer:

- **Dedicated private clouds** on client premises or in secure CGI data centers around the globe; including custom-designed or hyper-converged solutions
- **Local, multi-tenant, secure virtual private clouds** to address data residency requirements; compliance with local security and privacy aspects through retention of critical data and IT infrastructure in-country
- **Government-certified secure IaaS**, including a U.S. federal government FedRAMP¹ certified cloud and a United Kingdom IL3-certified Government Cloud. CGI was the first large cloud service provider to obtain both U.S. civilian agency and defense cloud security certifications.
- **Managed public hyper-scale clouds** (e.g., Microsoft Azure, Amazon Web Services), seamlessly integrated with the rest of your hybrid infrastructure
- Cloud-based mobile-device-enabled **virtual desktop infrastructure** (VDI) as a modern, secure, ubiquitous workspace solution
- **Legacy IT infrastructure** management and integration (e.g., UNIX, Linux, mainframe, storage, etc.)
- **Remote hybrid infrastructure management** (RHIM) services from our network of global control centers – onshore, nearshore and offshore

CGI also can assist clients with hybrid/virtual data center optimization, consolidation and modernization as well as business continuity optimization.

KEY BENEFITS

- Modernized hybrid infrastructure in line with digital business strategies
- Flexibility needed to support agile IT users, self-service and automation
- Increased governance, transparency and control
- Global resiliency and business continuity through optimal hybrid infrastructure design
- Shift from CAPEX to OPEX, lowering and aligning costs with business cycle
- Evergreen / futureproofed environments

¹ Provisional Authority to Operate (ATO) from the Federal Risk and Authorization Management Program (FedRAMP) Joint Authorization Board (JAB).

POWERFUL SERVICE MANAGEMENT FOR TRANSPARENCY, GOVERNANCE AND CONTROL

Our infrastructure offerings, including an optimal hybrid mix, are seamlessly integrated, governed, managed and available from the CGI Unify360 hybrid IT management suite, and supported by cloud consulting services. The CGI Unify360 platform supports ITIL V3 processes and provides a full portfolio of automation utilities to improve service effectiveness, including:

- An executive dashboard providing the real-time view of operations across infrastructure offerings
- Comprehensive monitoring tools that enable automated event correlation and pro-active and autonomic recovery
- A self-service storefront with customizable approval workflow and automated provisioning that provides agility and convenience to IT users to promote adoption (and avoid shadow IT), while providing the enterprise with greater governance and control
- Aggregated billing and chargeback creating transparency around resource usage and spend

The CGI Unify360 platform is designed in a modular fashion with an API gateway to support flexible integration options. It can use CGI-tested and integrated next-generation infrastructure management tools and/or components from a client's existing toolset.

Why CGI

- Trusted partner with front-line experience in migrating, managing and governing cloud services globally
- 40 years of IT service management expertise
- 10,000+ infrastructure professionals
- Certification for highest-security workloads
- ISO certified management framework to ensure consistent results
